

Collection

In collection Header we would like add a background picture of our own choosing
We would also like to be able to adjust transparency from 10-100% to dim the background

On the products page we would like the product text to be below and add a headline for a download section.

Each button should be a link to download of a file we upload. See draft on second picture

Draft of how it should look like – of course using our templates typeface and colors

SILENCER II - ORANGE EDITION

DOWNLOAD INFORMATION

PRODUCT INFO GRAPHICS

The tip of the line bucket on a belt is made from premium materials designed to stand up to the toughest of window cleaners.

The Silencer is about to take aim and annihilate basic buckets on a belt. Everything from the specially designed sections for tool storage to the military and industrial-grade construction materials makes this stand out to be your number one BCAB choice.

Features

The Silencer features three slots to store your tools. The middle section is designed to hold up to an 18-inch mop with it just grazing the bottom to soak up any reclaimed water. The other two compartments are intended for your squeegees or two in one bucket, up to 18 inches. If you have those two-handled window cleaners, you can easily fit both a squeegee and a mop in the middle slot. With all the space, you can hold up to four tools at once if you wanted to work with a mop, two in one, and two squeegees. If you find yourself continually bending while you work, consider putting your smaller squeegee in the back for greater maneuverability.

There are also divots in the front slot which are perfect for the handle to rest on. That way it isn't in the way so you can grab your tool freely and easily. The streamlined design of the Silencer makes it easy to use and grab your tools without looking. The Silencer is more compact, more portable, and more streamlined than other comparable options on the market today.

Reclaim System

The reclaim system keeps your mop wet and your legs dry. The tight sides of the reservoir keep water from sloshing around and out of the Silencer. It keeps the BCAB looking cleaner and your legs a lot drier. You don't have to deal with water running down the sides or splashing up when you walk. Leak-free is truly the way to be!

At the end of the day or when you need to dump it, you can unbutton it and tip out the bottom reservoir. The tip opening also makes it easy to access the interior for wiping it out. The binding around the tipping point is rubber so it doesn't soak up water. It is recommended to keep the water level about an inch and a half below the top of the binding so it doesn't overflow when you put your mop in. If you find you're having a hard time filling longer squeegees in the front slot, you can tighten the adjustable reservoir strap and they'll drop right in.

Highest-Quality Material

When you use your equipment every day, you need it to stand up to the demands and abuse of the job, and the Silencer will do just that.

The exterior surfaces are covered in a heavy-duty 1000 Denier military grade fabric. That means it's thick and sturdy for preventing scratches and protecting the integrity of the Silencer. Going through prickier bushes while cleaning exteriors of homes won't damage the Silencer as it would PVC. This abrasion-resistant and durable 1000D Cordura is easy to clean with a little soap and water so you can keep it looking new and professional. The interior dividers are heavy industrial grade vinyl with the strength to stand up to daily use. During construction, all the seams are double or triple stitched with additional bar-tack stitching on high-dress areas to prevent any failures. Stabilizer pieces on the upper back prevent the loop from over bending to keep the Silencer's shape and stability.

When it comes down to it, the Silencer is a stand out because the material is not cheap. On the contrary, it was extremely well thought out and designed with only the highest quality material to give it longevity and durability in the field. When you get the Silencer in your hands you will be able to feel the difference. It's built to last without weighing you down, at only 1.1 lbs.
